7 The Number and Installation of Combination Samples

It was required that four samples to be tested were installed by the manufacturer on the cables forming combination samples on which the type tests sequence 4.1 and 4.2 and 4.3 in table 7 were carried out. The cable used in the combination sample was a XLPE insulated single-core cable with rated voltage 12/20 kV, a cross-section of 50 sq.mm. The length of the cable in the combination sample was greater than 5 m between terminations and the samples. Other type tests listed in table 7 were carried out on other samples.

8 Test Sequence and Results

The test sequence and results were given in Table 1 (sequence 4.1), Table 2(sequence 4.2 and 4.3) and Table 3 (the other items).
